Executive Summary

THE 50 SITE CHALLENGE

01

ProbahoSoft operates on a simple, transparent, and proven business model: we raise funds in structured 12-month batches to build premium websites and digital platforms for real businesses worldwide. We use the invested capital to fund client acquisition and hire skilled developers. As we build and deploy these projects, client revenue enters our business accounts. At the end of the year, we calculate the profits and share them with the investors who made the expansion possible.

We are not asking you to invest in a concept—we are inviting you to scale a running operation. Our active 2025 Year-End Batch successfully raised ₹26 lacs and firmly secured 20 client projects. Today, that batch sits at a 62% overall completion rate with multiple projects already live. Based on actual booked client revenue and expected costs, **our last batch** is currently tracking an estimated **20.7% annual return for our investors**.

Because our client acquisition team is highly effective and ready to take on new customers, we are now seeking expansion capital to grow our development manpower. We are officially opening the **2026 Mid-Year Investment Batch** with a maximum target raise of ₹70 lacs. The number of new client projects we take on will be directly proportional to the funds raised during this booking period.

This is a strictly halal, profit-sharing investment opportunity—not an interest-based loan. We prioritize investor peace of mind through a clear, batch-wise accounting structure:

1. **Capital is returned first:** At the end of the 12-month cycle, your original investment is paid back to you from available cash before any profit is calculated.
2. **Profits are shared fairly:** After costs are covered, 43% of the remaining profit is distributed to investors.
3. **Distributions are fast:** We process all capital returns and profit payouts within seven days of the batch ending.

By joining the 2026 Mid-Year Batch, you are backing real digital work, supporting job creation for Bangladeshi developers, and participating in a transparent, business-backed profit-sharing model.

OUR BUSINESS MODEL

WHAT IS AN INVESTMENT BATCH?

At ProbahoSoft, we use a structured 12-month program called an Investment Batch. Each year has two batches: Mid-Year and Year-End. When you invest in a batch, your capital helps us secure, build, and deliver a specific group of client projects over a clear 12-month timeline.

Months 1 to 6

Fundraising & Kickoff

- Investor capital is raised (Maximum: ₹70 lacs per batch)
- Client projects are booked proportional to the raised funds
- Hiring and operational kickoff begins
- Capital enters the business working pool

Months 7 to 12

Completion & Distribution

- Client websites are completed, tested, and deployed
- Final client revenues are collected
- Original investor capital is returned first
- Remaining profit is shared (43% to investors)

01

Funds are collected

Investors join during the batch opening period. The raise is capped and time-boxed.

02

ProbahoSoft books real client work

We use the batch capital to take on and build real website and automation projects for paying clients.

03

Client revenue is collected

Across the batch cycle, projects go live and clients pay for the work delivered.

04

Capital returned first, then profit shared

Investors receive their original capital back first. Remaining profit is then shared on a fixed split.

HOW EACH INVESTMENT BATCH WORKS

Each batch runs on a structured 12-month cycle: the first 6 months for raising capital & booking client work, the next 6 months for completion, deployment & revenue collection.

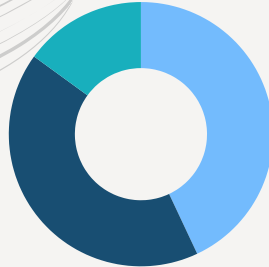

Expected Returns
